## SECTION I.—POPULATION AND VITAL STATISTICS

**NOTE.—Estimated Population of States.**—For dates subsequent to the latest population Census the estimated population in each State represents the population ascertained at the Census plus natural increase and recorded net migration into the State since the Census. As complete records of interstate migration are not available, the estimated State populations so derived are approximate and are subject to revision when the actual population of each State is ascertained at the next Census. For some States such revisions were substantial after the Census of 1966. Particulars of population in this section are exclusive of full-blood Aborigines.

(a) Refers only to disputes involving a stoppage of work of ten man-days or more. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute. (c) Includes the Northern Territory and the Australian Capital Territory.

NOTE.—Disputes not settled at the end of a year are included as new disputes in the figures for the following year. Disputes not settled at the end of a quarter are not counted in the number of disputes for the following quarter, but additional workers involved and working days and wages lost are included.

(a) In some cases, union members in the Territories associated with State organizations are reported under the heading of that State. The annual figures reflect, in part, progressive movements to more accurate reporting and the comparability of totals for the Territories is affected by this aspect.  
 (b) Without interstate duplication. The State figures do not add to the Australian total because a union represented in more than one State is included in the figure for each State in which it is represented, but is counted only once in the Australian total.

**INSTALMENT CREDIT FOR RETAIL SALES FINANCED BY RETAIL BUSINESSES AND NON-RETAIL FINANCE BUSINESSES**

The statistics in the following tables cover instalment credit schemes which relate primarily to the financing of retail sales of goods. In general "instalment credit" is defined as relating to schemes in which repayment is made by regular predetermined instalments, and includes Hire Purchase, Time Payment, Budget Account, and Personal Loan Schemes which relate primarily to financing of retail sales of goods. The first three tables include all such credit, whether it is advanced by retail businesses (including finance subsidiaries of retail businesses) or by non-retail finance businesses. The fourth table shows particulars for non-retail finance businesses only.

## COMMONWEALTH SALES TAX—SALES OF GOODS AND TAX PAYABLE

NOTE.—An indication of fluctuations in the value of wholesale trade is given by the returns made under the Sales Tax Acts. With certain specified exemptions, all goods sold by wholesale in Australia, including imports, are taxable. The returns do not relate to all wholesale trade, as vendors trading only in exempt goods are not required to furnish returns. They do not necessarily cover a constant proportion of all trade. The effects of legislation and administrative changes on the recorded values of taxable and exempt goods respectively are somewhat uncertain, but total recorded sales are affected in smaller degrees. Insufficient information is available to enable adjustments to be made to the crude figures on this account.

There are other relatively minor payments for which adjustments have not been made and the adjusted figures are therefore still slightly overstated.

(a) Teachers-in-training are generally excluded. (b) The methods used for calculating equivalent full-time units of part-time teaching vary from State to State, between government and non-government schools and between primary and secondary schools within States. For most schools the information is based on either the total hours worked or total number of class periods taken in a week by part-time teachers in relation to the normal hours worked or periods taken by full-time teachers. (c) A large proportion of part-time male teachers in Victoria is engaged in junior technical schools. A teacher is included as part-time if his teaching time at a junior technical school is less than 32 hours per week. (d) Unqualified teachers and teaching assistants at mission schools are excluded.

(a) Includes, in addition to wages at award rates, earnings of salaried employees, overtime earnings, over-award and bonus payments, payments made in advance or retrospectively during the periods specified, etc.

(b) Total wages and salaries, etc., divided by total civilian employment expressed in male units. Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. As it is not possible to estimate the ratio of female to male earnings in the several States, the same ratio has been used for each State. Because the actual ratio may vary between States, precise comparisons between average earnings in different States cannot be made on the basis of the figures above.

(c) Includes Australian Capital Territory.

(d) Includes Northern Territory.

NOTE.—Quarterly figures are affected by seasonal influences. Comparisons as to trend are generally best made by relating complete years or corresponding periods of incomplete years. Indexes of average weekly earnings, seasonally adjusted, are shown in the next table.

(b) Average earnings per employed male unit. Based on Payroll Tax returns and other data.

(c) The index for manufacturing industries for the years 1956–57 to 1964–65 is based on the average earnings of male wage and salary earners employed in factories as disclosed by annual Factory Censuses. The figures from September quarter, 1965 are interim estimates based on Payroll Tax returns and are subject to revision when the Factory Census for 1965–66 is tabulated.

## INDEXES OF MINIMUM WAGE RATES AND HOURS OF WORK

NOTE.—The indexes of weighted average minimum weekly and hourly wage rates and standard hours of work shown on this and the following two pages are based, in the main, on the occupation structure existing in 1954.

Each of the occupations included in the indexes is individually weighted. From the wage rates and hours of work for these occupations, weighted averages are calculated for each industry and for all groups.

In the following tables the weighted averages so calculated are shown in dollars and cents and also as index numbers with the weighted average for the year 1954 as base (=100).

For details of wage rates and index numbers from 1939 reference should be made to the following Statistical Bulletins:—S.B. 123, *Minimum Weekly Wage Rates, 1939 to 1959*; and S.B. 31, *Minimum Wage Rates, January, 1960 to June, 1963*. Figures for the months July, 1963 to June, 1964 will be found in the monthly bulletin, *Wage Rates and Earnings, June, 1965*. Figures for months subsequent to June, 1964 will be found in the monthly bulletins, *Wage Rates and Earnings*, commencing with the June, 1966 issue.

(b) Rates operative from beginning of first pay-period commencing in month shown or commencing on or after the date shown. (c) Automatic adjustment of basic wages in accordance with variations in retail price index numbers discontinued.

NOTE.—Since December, 1950, the female basic wage has been 75 per cent of the corresponding male rate.

**STATE BASIC WAGES**

In New South Wales automatic quarterly adjustments to the basic wage were discontinued following legislation passed in October, 1964, and Commonwealth basic wage rates were adopted, retrospective to 19th June, 1964. State basic wages are not declared in Victoria and Tasmania, but Wages Boards, which determine minimum rates to be paid in various industry groups or callings, now generally adopt Commonwealth rates. In Queensland, the industrial authority may declare a basic wage only after an inquiry. In South Australia the rates have been the same as Commonwealth rates since 1950. The industrial authority in Western Australia determines the basic wage each quarter after considering retail price index numbers. In all States, since May, 1961, the basic wage for adult females has been 75 per cent of the adult male rate.

NOTE: The separate city indexes measure price movements within each city individually. They do not compare price levels between cities.

## AVERAGE RETAIL PRICES

Average retail prices of food and groceries as previously published for capital cities and principal towns are now collected monthly in the State capital cities and Canberra only. These prices are published regularly in the following publications of this Bureau:—“Average Retail Prices of Food and Grocery Items” (quarterly) and “Labour Report” (annual).

## WHOLESALE PRICE (BASIC MATERIALS AND FOODSTUFFS) INDEX

Commodities in this index are priced in their primary or basic form wherever possible. The prices used have, in the main, been obtained directly from manufacturers and merchants and, with a few important exceptions, from Melbourne sources. The weighting system adopted is based on estimates of the average annual consumption of the commodities in Australia during the years 1928-29 to 1934-35 inclusive. Work is proceeding on the preparation of new series of wholesale price index numbers. Meanwhile the present series continue to be compiled on their existing basis, which has become increasingly affected by changes in usage, changes of category as between "imported" and "home produced" for some commodities, and changes in industrial structure.

(Base of each Index: Average of 3 years ended June, 1939 = 100)

(a) Represents only such imported commodities as are included in the Wholesale Price Index and does not measure changes in prices of all imports.

## FARM PRODUCTION PRICE INDEXES

The annual indexes shown in the following table relate to average "prices" of farm products realized in the principal markets of Australia. The "price" data used are average unit values for the total quantities of the relevant commodities produced or marketed in each year and the indexes therefore measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, etc., of products marketed. The indexes for any year relate to the average values of farm products produced or marketed in that year, irrespective of the periods in which payment is received by producers.

The indexes shown below are the Revised Series (December, 1952) in which average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights.

(Base: Average of 3 years ended June, 1939 = 100)
